ABSTRACT

An inflating toy, whereby, after soaking the inflating toy in water for a period of time, the inflating toy thereupon inflates in size manyfold, and primarily comprising an inflating toy and a covering; the inflating toy is fitted within the covering. The covering is filled with an appropriate quantity of water, such that the inflating toy is completely soaked in the water, and thereupon gradually expands in size manyfold with the lapse of time. However, volume expansion of the inflating toy is limited to expansion within the covering, thereby precluding children from mistakenly eating the inflating toy, and enhancing safety thereof.
